Monteath

1-800-922-1029

Dear Fellow Woodworkers:

We offer this catalog to assist you in the design and layout of your work. It represents only the very basic services that we can offer you. The mouldings depicted in this catalog are stocked in our warehouse store. Most are available in Cherry, Mahogany, Maple, Oak and Poplar. We will match and manufacture any profile you desire in over 50 different species. The lumber listed in this booklet only represents what is currently stocked. We also handle many other species for a wide variety of customers and would be glad to quote your needs on any other type of lumber.

We offer IPE decking as a compliment to our line of fine cabinet hardwoods. We firmly believe this to be the best decking material available in any form. For more information about IPE, please visit our website at www.monteath.com.

It is our commitment to sell only the finest quality material at truly competitive prices. Both myself and all of the Monteath employees stand ready to serve you in any way we can.

Sincerely,

Steve Wilson, President
MONTEATH MOULDING and
JH MONTEATH LUMBER COMPANY

MOULDINGS

All of our mouldings are priced and sold on a lineal foot measurement. One lineal foot of moulding is 12" long, regardless of the thickness and width.

The profiles depicted on the following pages are inventoried in our warehouse store.

Curved Mouldings can be made to order in solid wood or flexible resin to precisely match our stock profiles.

Custom Mouldings can be made to order to match any profile. A scaled drawing, or a sample along with the quantity desired and the specie of lumber is all that is needed to receive a price quotation.

Manufacturing. We operate four moulders on our premises and a variety of support equipment to assure our quality. All stock mouldings are manufactured by our staff. We do offer embossed and carved mouldings from other manufacturers.

A Word about Mahogany

Over the last few years the price of Genuine Mahogany has skyrocketed. Today, the availability of steady supplies of quality lumber is very limited. In addition, there has been no Genuine Mahogany Plywood available for several years.

Two reasonable substitutes are available in large supplies. They are African and Sapele Mahoganies. Both are native to Central Africa and are significantly cheaper than that of the Genuine. Due to the tendency of the grain to tear in the machining of African Mahogany, we have chosen to stock Sapele Mahogany in lumber and plywood. During the first quarter of 2005 we replaced our Genuine Mahogany mouldings with Sapele Mahogany.

We will continue to stock Genuine Mahogany lumber when available. We will run any of our stock mouldings from that inventory on a custom basis.

LUMBER

All lumber is offered for sale on a BOARD FOOT (Bd. Ft. or BF) Basis. This unit of measure uses full rough sawn thickness, in 1/4" increments, prior to any machining. Rough lumber is always referred to in quarters of an inch. (i.e. four quarters - 4/4 equals 1" rough sawn, five quarters - 5/4 equals 1-1/4", eight quarters - 8/4 equals 2") Minimum rough thickness is 4/4 or 1".

In practice, board foot calculation is simply the square feet of surface multiplied by the thickness and can be computed as follows:

**width in inches x length in feet DIVIDED BY 12 x thickness
= Bd. Ft.**

For example: A board measures 9" wide x 8' long and is 1-1/2" thick. Calculation would be 9×8 divided by $12 \times 1.5 = 9$ Board Feet (BF).

When lumber has been surfaced, it is always referred to by an exact size. (i.e. 13/16" or 1-1/4") The board footage is calculated from its original rough dimension.
